Wright a blog on document vs window object?

Window Vs Document

Window object : It is the top most object and outermost element of the object hierarchy .

Document object : Each HTML document that gets loaded into a window becomes a document object. The document contains the contents of the page. Using document object, JavaScript can modify, add and delete the HTML elements, attributes CSS styles in the page.The *window object* represents a window/tab containing a DOM document where as *document object* is property of *window object* that points to the DOM document loaded in that window.You can access a document object either using *window.document* property or using document object directly as window is global object. In the below example, title is the property of document object.
